NATIONAL INCOME AND EXPENDITURE OF THE UNITED KINGDOM 1938 TO 1946

I. NATIONAL RESOURCES AND THEIR DISPOSAL

The national income of the United Kingdom is estimated to have been about £4,670 million in 1938, the last year before the war. During the war, owing on the one hand to an increase in the number of persons employed and in overtime working and on the other to rising prices the national income rose steeply, reaching a peak of about £8,350 million in 1944. In 1946 it fell slightly because of a fall in the working population, reductions in hours of work and the dislocations inherent in the transfer of resources from war-time to peace-time uses. The extent of this fall is still uncertain: it has in this Paper been estimated, provisionally, at about £400 million.

The national income is not, however, a measure of the resources currently available for expenditure on consumer goods and services and on additions to domestic capital equipment. During the last eight years this country has been able, by borrowing from abroad and realising its foreign assets, to overspend its income. The extent of this overspending is shown in table I below, where the national income, or current product of the British economy, is compared with the country's net expenditure on goods and services. Over the period 1940 to 1945 more than 10 per cent. of the value of goods and services used by this country was financed out of foreign loans or bought at the cost of a sacrifice of assets held overseas. Even in 1946, when external disinvestment was less than half the peak level of 1945, about 5 per cent. of domestic expenditure was out of money borrowed from abroad.

NATIONAL RESOURCES AND THEIR DISPOSAL(1)

TABLE 1								£	millior

sale of assets to foreigners	70	645	875	400	Government Net non-war capital for- mation at home	765	3,838 —199	4,320 118	2,261 693
Total resources available for use at home	4,741	7,672	9,215	8,374	Total resources used at home	4,741	7,672	9,215	8,374

⁽¹⁾ For notes on the items of this table see p. 56.

Table 2 illustrates the same point in a slightly different way. It shows the proportion of the national income—the currently produced output of this country—that has been devoted to meeting immediate needs (i.e. spent on goods and services currently consumed) and to acquiring additional assets either in this country or overseas. It will be seen that, in fact, in addition to sacrificing foreign assets and accumulating heavy liabilities, this country allowed its domestic capital equipment to run down in each of the war years. 1946 was the first year since 1939 in which any appreciable net addition was made to the country's stock of capital equipment—houses, factories, plant and stocks of goods.

⁽¹⁾ For notes on the items of this table see p. 56.

The extent to which we still depend on foreign credits to finance our recovery is shown in tables 3 and 4 below. Table 3 sets out the current balance of payments between this country and the outside world in the two years 1938 and 1946. In 1946, despite a recovery of the volume of British exports almost to the 1938 level, our current receipts from abroad were still £400 million short of our payments for imports, relief to devastated countries, the administration of the British zone of Germany and military and other commitments overseas. Table 4 shows the effect which this current deficit had on our holdings of different foreign assets and our liabilities of different types. It will be seen that of our total disinvestment abroad in 1946 £279 million represented drawings on the United States and Canadian lines of credit.

⁽¹⁾ For notes to the tables see pp. 56 and 57.

Information on the changes in our domestic stock of capital is scanty and it is not possible to provide an exhaustive analysis of net capital formation at home. The accuracy of this figure is still dependent on the accuracy of the other elements of national income and expenditure. Net capital formation in 1946 is tentatively put at about £700 million, which would imply a figure of gross capital formation (including replacements of worn-out assets as well as certain maintenance work) of some £1,300 million, compared with £770 million estimated to have been spent in 1938.

£ million

⁽²⁾ For comparable estimates of external investment in 1945 and for the level of the United Kingdom's external assets and liabilities see Appendix IV.

This comparison is in itself misleading, however, since it takes no account of the change in price-level. The evidence suggests that the level of gross fixed capital formation was roughly two-thirds of the level immediately before the war. One component of the 1946 total is given in table 5. The total shown in this table does not represent the total value of building work since it excludes both the cost of manufacture of non-traditional houses (which was of the order of £100 million) and building and constructional work done outside the industry.

⁽¹⁾ Including the conversion and adaptation of existing houses.

Much more is known about government expenditure on goods and services and personal consumers' expenditure. In 1946, 28 per cent. of the national income was spent by public authorities, compared with 55 per cent. at the peak of the war effort in 1943 and 16 per cent. in 1938.

About 68 per cent. of the national income in 1946 was devoted to providing goods and services for personal consumption, against 57 per cent. in 1945 and 78 per cent. in 1938. These changes are discussed in more detail in Section III.

⁽²⁾ Including maintenance and repair of houses and new construction and maintenance of other buildings not included elsewhere.

II. THE COMPOSITION OF THE NATIONAL PRODUCT

An analysis of the contributions of different industries to the national product is unfortunately still not available. Table 6 gives a breakdown for 1945 and 1946 of one component of the national income—the wage bill—according to the branches of activity in which it is earned.

COMPOSITION OF THE NATIONAL WAGE BILL(1)

⁽¹⁾ For notes on the items of this table see p. 57.

The division of industries between investment goods and consumer goods and services is inevitably arbitrary; each of the industries for which separate statistics of employment are provided by the Ministry of Labour has been allocated according to the preponderant end-use of its output.

The changes between the two years are due to several factors: changes in total numbers employed, in the proportions of men, women and juveniles in the total and in average earnings. In metal goods, farming and coalmining changes in average earnings (to some extent due to an increase in the proportion of men) were the principal cause of the change in their wage bills. In metal manufacturing, food, drink and tobacco, textiles and "other manufacturing industries" changes in numbers employed and changes in average earnings were of approximately equal importance. In other industries, notably in motors, cycles and aircraft, the main influence was the change in the numbers employed.

It is not possible to use this table as a measure of the relative contributions of different industries to the national product since no data are available on the ratio of wages to the total net output of each industry.

Table 7 gives a breakdown of the net product of all business enterprises between labour incomes and property incomes. The share of wages was in 1946 slightly above its pre-war level; salaries, whose proportionate share declined greatly during the war, have recovered some ground during the last year, largely at the expense of property incomes, which gained during the war and as far as can yet be estimated fell back somewhat during 1946. It must be remembered that the estimates of property income include the earnings of farmers and professional earnings as well as trading profits in the narrower sense.

⁽¹⁾ National income, less gross income from abroad, wages of domestic servants, income generated in the non-trading services of public authorities and the net rents of dwellinghouses.

⁽²⁾ Including farmers' profits and professional earnings.

III. PRIVATE INCOME AND OUTLAY

The total of private incomes is not the same as the national income since it includes interest on the national debt, which from the Government's point of view may be thought of as negative income, and also receipts of social security payments and other transfer payments made by public authorities.

Private disposable income is private income after payment of direct taxation. During the war not even the whole of this was available for current spending by individuals, since a part was blocked in the form of income tax and pay credits only cashable at some future date.

Table 8 gives an analysis of private income by types of income and shows the relation of total income before tax to the amount available for current consumption or saving.

TARIFR

Changes in the burden of taxation, were, of course, uneven between different types and different ranges of income. Thus, it will be seen from table 9 that, whereas the share of wages in the total labour and property income of civilians (including the undistributed profits of companies) before tax remained more or less constant over the period under review, wage-earners' share of income after tax rose from 39 to 44 per cent.

⁽¹⁾ The figures in this table exclude the income of the Armed Forces.

⁽²⁾ Excluding income tax repayable as post-war credits.

⁽a) The taxes on each of these types of income are set out in detail in table 35 of Appendix VII. The taxes deducted in this table include income tax repayable as post-war credits.

The redistributive effects of direct taxation are measured from a different point of view in table 10. This table shows the shares of personal income that went to persons in different ranges of income before and after deduction of income tax and surtax.

DISTRIBUTION OF PRIVATE INCOME BY RANGES OF INCOME(1)

TABLE 10

Range of income before tax	Number of	Total	Total i after in tax and s	ncome surtax(²)	Proportion of income before tax retained after deduction of taxes at

Private income in 1945 Private income at the disposal of individuals(3) which can be allocated to different ranges:— Under £250 £250-500 £500-1,000 £1,000-2,000 £2,000-10,000 £10,000 and over	1	3,565 1,895 1,140 535 462 138	3,553 1,833 1,027 439 335 76	3,449 1,621 833 339 220 26	99·7 96·7 90·1 82·1 72·5 55·1	96·7 85·5 73·1 63·4 47·6 18·8	
Unallocated private income		1,480(4)		870		58 · 8	
Total private income	_	9,215(4)		7,358		79 · 8	

⁽¹⁾ For notes on this table see p. 59.

⁽²⁾ The estimates of income in this table relate to calendar years; the tax-rates used are those that were current in the fiscal years 1938-39 and 1945-46.

⁽⁸⁾ A married couple is for income tax purposes counted as one individual.

⁽⁴⁾ Including all liabilities for National Defence Contribution and Excess Profits Tax, which are deducted together with income tax in arriving at retained income.

During the war years the proportion of private income spent on current consumption fell for obvious reasons, and saving, including undistributed profits, rose from 7 per cent. of private income in 1938 to 21 per cent. in 1943. In 1945 the proportion saved fell to 15 per cent. and in 1946 the proportion of income saved—8 per cent.—was nearly back to the pre-war ratio. In absolute figures, private saving in 1946 was £721 million compared with £339 million in 1938.

DISPOSAL OF PRIVATE INCOME

TABLE II						_		£	million

Tax liabilities as a percentage of private income	22	24	27	33	33	33	33	32	32

⁽¹⁾ Excluding income tax repayable as post-war credits.

From table 12 it will be seen that tax liabilities represented 22 per cent. of private incomes in 1938, compared with about 33 per cent. from 1942 onwards. This rise was not due wholly to increases in rates of taxation: it was also largely due to the fact that the goods and services, the consumption of which increased the most—beer, tobacco and entertainments—were also the most highly taxed.

It is this factor that explains some of the discrepant movements in personal expenditures on particular consumer goods and services. There is no reason to suppose that, in an economy with complete freedom of choice, the particular distribution of expenditure shown for 1945 and 1946 in table 13 would occur.

PERSONAL EXPENDITURE ON CONSUMERS' GOODS AND SERVICES AT CURRENT MARKET PRICES(1)

TABLE 13					`			£	million
-	1938	1939	1940	1941	1942	1943	1944	1945	1946

⁽¹⁾ For notes on the items of this table and a more detailed breakdown of consumers' expenditure see Appendix III.

(2) It is necessary to make a specific adjustment in order to convert the total in line 17 to a total of purchases out of British income.

The changes in consumer habits that have occurred are obviously the direct result of shortages of particular items. Expenditure on drink and tobacco is now nearly 20 per cent. of total personal expenditure, compared with 11 per cent. before the war. Expenditure on food, in 1938 30 per cent. of the total, was, even after a fairly sharp rise in 1946, still only 25 per cent. of personal expenditure. Clothing and household goods recovered in 1946 part of their old importance in consumers' budgets but still accounted for considerably less than their pre-war proportion of expenditure.

PERSONAL EXPENDITURE ON CONSUMERS' GOODS AND SERVICES REVALUED AT 1938 PRICES(1)

TABLE 14 £ million

⁽¹⁾ For notes on this table see Appendix III.

⁽²⁾ See footnote (2) to table 13.

In real terms the changes in relative importance have been less striking. This is largely the result of the differential effects of price-control, indirect taxation and subsidies. Table 14 shows personal expenditure on each of the groups of items given in table 13 revalued at 1938 prices. When the quantities of each item are in this way weighted by 1938 prices instead of by current prices the pattern of expenditure looks very different. Drink, tobacco and entertainments, the three most heavily taxed items, although their consumption has risen absolutely, have a much smaller relative importance. Food, the price of which has been kept low by subsidies, becomes more important.

The changes in each group of expenditure between 1938 and 1945 and during the last year speak for themselves. Consumption of food increased by 10 per cent. between 1945 and 1946, of clothing by 18 per cent., and of durable household goods by 80 per cent. These items are singled out as of especial importance.

In interpreting these changes, it is essential to bear in mind exactly what the figures attempt to measure.

Each series is a measure of total national consumption in each year re-valued at 1938 prices. At a time when both the size and the composition of the population is changing rapidly, the average experience is bound to be different. A considerable part of the rise in household food consumption in 1946, for example, is undoubtedly due to the extra 6 per cent. that demobilization has added to the civilian population. It is partly offset by a fall in the issues in kind to the Armed Forces.

Secondly, because the consumption of no individual person corresponds with the national average, disparate changes in the prices of different goods and services have necessarily had a redistributive effect similar to that of progressive taxation. The changes in the price of luxuries and semi-luxuries have been very different from those of subsidized goods which form a more important part of the budgets of the poorer sections of the community.

Thirdly, although wherever possible an attempt has been made to revalue the goods and services bought at an appropriate 1938 price, there is no doubt that it has been impossible fully to take account of changes in quality, some of which were in an upward direction, but most of which were downward movements. In certain cases, there is a conceptual difficulty in taking any account of quality changes. In the case of what may be considered joint products—e.g. a loaf of bread, plus its delivery to one's house—the only part of the joint product which lends itself to quantitative measurement is the loaf. The disappearance of delivery services is thus not shown as a decline in consumption although there has obviously been a decline in satisfaction. Similarly, in table 14 a passenger-mile in a crowded slow train is treated as identical with a passenger-mile in a comfortably empty fast train.

In certain other cases, it would in principle be possible to apply a correction for this factor but the poverty of statistical data for 1938 makes it difficult. It is hoped, however, in the future to provide a revised series for food consumption. In the meantime all that can be said is that the series given here is too high, because it fails to make adequate allowance for wartime declines in the quality of meat, preserves, vegetables and certain manufactured foods. This is not to say that a series weighted by nutritional factors would not have shown an even smaller fall during the war years than the one given here.

Fourthly, the figures do not claim to measure consumer satisfactions and make no allowance for restrictions in consumers' choice. As has been mentioned above, some of the items which have shown rises have obviously been inadequate substitutes for other items in shorter supply.

This last qualification is particularly relevant to the interpretation of the movement of the total shown for each year. The last line of the table purports to show what the goods and services actually consumed in each year would have cost in 1938. The quantities of each item actually bought in any particular year have been revalued at their 1938 prices and the resulting products have been added in order to arrive at a total. Thus, the fact that the 1946 aggregate is rather higher than the 1938 figure does not, in itself, mean that standards of consumption were by 1946 back at their pre-war level. It means simply that the particular collection of goods and services actually bought in 1946 would, if bought in 1938, have cost rather more than the goods and services that consumers in fact preferred to buy in that year.

APPENDIX I

NOTES ON THE MAIN TABLES

Table 15

- I. This item represents the income from the ownership of lands, houses, etc., as assessed for income tax under Schedule A, after allowance has been made for maintenance and repair. Incomes from these sources below the effective income tax exemption limit are included, as also are those received by non-profit-making bodies, e.g. charities, colleges, etc. Premises occupied by their owners are treated on the same basis as rented premises. Rents paid by occupiers in excess of Schedule A values are excluded from this item, since they cannot be estimated. So far as they attract income tax under Schedule D they have been included in profits.
- 2. Aggregate profits here are net, after current business losses have been deducted. This item excludes interest on the national debt and also income due to foreigners after deduction of income tax, but includes miscellaneous government income such as trading profits, receipts under the railway agreement, certain receipts from abroad and central government taxes paid by foreigners. It also includes profit and interest not brought into assessment, including income in kind and the amounts received by persons below the income tax exemption limit or by non-profit-making bodies, and incomes, whether or not below the income tax exemption limit, accruing to persons working on their own account. In addition to profits and interest this item includes rents paid in excess of Schedule A values, so far as they attract income tax under Schedule D.

The corresponding item in Cmd. 6784 included the trading profit of the Post Office, which has here been treated as an indirect tax and not as a business profit. An increase in wear and tear allowances granted by the Inland Revenue reduced the figure of profits in 1946.

- 3. Aggregate salaries include: (a) the whole of the earnings of shop assistants, (b) allowances of salary earners not brought under assessment to income tax.
- 4. This item includes an allowance for the income in kind (food, lodging, etc.) of, e.g. domestic servants, miners and farm workers. The estimate of personal expenditure on consumption at market prices (item 7) includes a similar allowance.
- 5. This item includes: (a) the pay and cash allowances of, and the value of issues of food and clothing to, members of H.M. Forces and Auxiliary Services, other than those on release leave, (b) the pensions and retired pay of former members of the Armed Forces other than pensions awarded for death or disability attributable to war service and (c) the sums accruing during their service to the credit of members of the Armed Forces and subsequently received as a post-war pay credit. This last component was treated in Cmd. 6784 as a transfer payment made at the time the sums were freed. War pensions and payments and issues of civilian clothing to members of the Armed Forces on release leave are treated as a transfer income and form part of item 19 of table 16.
- o. This item is the sum of items I to 5 and is an estimate of the incomes received by factors of production in, or only temporarily absent from, the United Kingdom in the course of producing the current output of goods and services of all kinds. These incomes are before tax, since all taxes, direct and indirect, falling on them, whether paid directly by individuals (including non-profit-making bodies) or through businesses or public authorities, will be paid

out of them. I he item excludes that part of gross receipts which is allowed in the calculation for tax purposes of net rent and profit in respect of the maintenance and repair or replacement of all existing capital equipment.

The estimates of labour income given in items 3, 4 and 5 do not include employers' contributions to national insurance (unemployment, health and pensions insurance). These payments are, however, included in the income figures for some countries and are therefore shown separately in item 43 of table 21.

- 7. This item shows the money value of all consumers' goods and services either bought by individuals and non-profit-making bodies or received by them as income in kind. The figures shown here are therefore at prices which include those indirect taxes (taxes on outlay in a wide sense, including local rates and employers' contributions to national insurance and war risks insurance premiums) which appear in the market value of these goods and services. They exclude costs which, being met by government subsidies, do not enter into market values.
- 8. This item excludes expenditure by public authorities which does not arise from a direct demand for goods and services. Thus it excludes (i) transfer payments and (ii) loan repayments, payments to sinking funds, etc., by the central government. It excludes, moreover, the issue to the Land Fund in 1946 of £50 million; when the Fund acquires any land its expenditure will form part of public capital formation. Loan repayments and payments to sinking funds by local authorities on rate fund account are included in lieu of depreciation allowances as part of the current cost of providing the services. Subsidies, which are shown in item 12 below, are excluded, as are operating expenses incurred in the provision of services which are sold and not made freely available. Net non-war capital expenditure is excluded from this item and is included in item 9.

This item differs from the corresponding item of Cmd. 6784 in one important respect: it is no longer a figure of cash payments but approximates more closely to a measure of the work currently performed on government account. It therefore includes the estimated annual increase in the central government's liabilities to industry, which was shown as a separate item in table 20 of Cmd. 6784. (This estimate is now shown separately in the more detailed tables of Appendix II: item 24 of table 19.)

With the exception noted below, Lend-Lease assistance and, in 1942, expenditure equivalent to the Canadian contribution are excluded from this item. Thus, this series is not a consistent measure of the value of the total amount of goods and services currently at the disposal of public authorities since it includes resources obtained by borrowing from, or sale of assets and financial claims to, countries abroad, but not those obtained under Lend-Lease or as a result of the Canadian contribution.

The 1945 figure includes an amount of £161 million (\$650 million) to cover the final settlement with the Government of the United States of Lend-Lease, Reciprocal Aid, surplus war property and other claims although since no cash payment has been made this expenditure is not included in Exchequer issues.

9. This item is composed of (a) gross expenditure, both public and private, on fixed capital and its upkeep, i.e., new additions, replacements and repairs (including war damage repairs), less (b) maintenance expenditure and depreciation allowances deducted from gross revenue in arriving at the figures of net rent and profits shown in items 1 and 2, less (c) increases

in assurance reserves to meet claims by business insurers, less (d) receipts in respect of business insurance claims for damage (other than war damage) to fixed capital, less (e) expenditure on the maintenance of the property of government non-trading undertakings, less (f) sums repaid to lenders and transferred to sinking funds by local authorities on rate-fund account, plus (g) the increase in stocks (including replacements of war losses) as valued for the calculation of profits in item 2. It is equal to item 60 of table 18 less item 56.

It has been impossible to make a direct estimate of all the constituents of this item for the war years. The figures in brackets have been obtained by subtracting the sum of items 7, 8, 10, 12 and 13 from item 6 and are therefore dependent on the accuracy of those estimates.

10. This item is an estimate of the net increase (or, since in fact in each year it is negative, decrease) in the external assets of the United Kingdom. The amounts shown for the war years are believed to understate the extent to which the country's international position has deteriorated.

This item is equal to the United Kingdom balance of payments on current account. This balance represents the excess of payments over receipts on current account and is required here since receipts for exports and similar services which give rise to income in this country do not appear elsewhere in expenditure, whilst payments for imports and similar services which do not give rise to such income appear in items 7 to 9 and have, therefore, to be deducted.

Lend-Lease has entered into this item, as into item 8, in only one year: the 1945 figure includes the liability of £161 million to the Government of the United States to cover the net sum due for the settlement of Lend-Lease and reciprocal aid, etc., mentioned in the note to item 8.

- II. This item (the sum of items 7 to 10) represents the total expenditure at market value by the United Kingdom on current consumption and on additions to assets. It differs from the national income because it includes certain payments (indirect taxes) not going to factors of production and excludes others (subsidies) which do remunerate factors of production.
- 12. This item is included here since it represents payments in respect of costs not appearing in the market value of goods and services. It is restricted to the following classes of payments made by the central government towards the cost of goods and services bought by the public: (i) agricultural subsidies such as the beet sugar subsidy, milk subsidy, wheat deficiency payments and grants in respect of fertilizers, grassland ploughing and field drainage, (ii) acreage payments, (iii) losses incurred on the commercial accounts of the Ministry of Food and the Ministry of War Transport, (iv) subsidies in respect of coal paid by the Ministry of Fuel and Power, (v) subsidies in respect of utility cloth, (vi) certain subsidies in respect of raw materials and fertilizers met by the Ministry of Supply, and (vii) housing subsidies.

The corresponding item in Cmd. 6784 excluded housing subsidies, which were treated as government expenditure on goods and services.

13. This item consists of taxes on outlay. These taxes require to be deducted from item II since they enter into the market value of goods and services but do not remunerate any factor of production, i.e., do not form part of the national income.

The item includes (i) customs and excise duties, (ii) motor vehicle duties, (iii) stamp duties, (iv) the trading profit of the Post Office, (v) wireless licence receipts, (vi) local rates, (vii) compulsory contributions of employers to the national health and unemployment insurance and contributory pensions schemes and (viii) premiums paid under the commodities and marine war risks insurance schemes. Not all these components were previously treated as indirect taxes, so that this item is wider in scope than the corresponding items (15, 16 and 17) in table 20 of Cmd. 6784.

An estimate of the amount of taxes entering into the value of exports and therefore ultimately paid by foreigners has been deducted since these receipts are now treated as a part of the national income.

14. This item is the sum of items 11 to 13 and is an estimate of expenditure on the factors of production in, or only temporarily absent from the United Kingdom. It is, therefore, by definition equal to item 6.

Table 16

- 15. This item is composed of items 1 and 2 of table 15, plus national debt interest and the increase in interest accrued on National Savings Certificates (i.e. less item 43 of table 17), less private income not accruing to persons (item 31), less trading profits, interest and rents received by public authorities (item 42 of table 17).
 - 16. The sum of items 3 and 4 of table 15.
 - 17. The same as item 5 of table 15.
- 18. Old age pensions, contributory pensions, supplementary pensions, family allowances; the Ministry of Food's contributions towards the cost of food and vitamin products supplied under the National Milk Scheme and the milk-in-schools and vitamin schemes; cash benefits under the national health insurance scheme; unemployment insurance benefits; unemployment allowances and outdoor relief paid by local authorities. These payments are shown separately as items 26, 49, 50, 51 and 60 of Appendix II.
- 19. This item consists of war gratuities, the pay and cash allowances of members of the armed forces on release leave and the cost of the civilian clothing issued to them on their release, cash payments in respect of war pensions and service grants, billeting allowances, fireguards' subsistence allowances, travelling and lodging allowances of transferred workers, trainees' wages and lodging allowances, State scholarships and maintenance allowances to students. A breakdown of this item is given in item 27 of Appendix II.
- 20. This item is the sum of items 15 to 19 and shows the total of disposable income received by persons (including non-profit-making bodies).
 - 21. This item is equal to item 7 of table 15, less item 22.
- 22. That part of the excess of indirect taxes (item 13 of table 15) over subsidies (item 12 of table 15) which falls on consumers' expenditure.
- 23. This item includes payments of income tax and surtax on personal income other than the sums due for repayment as post-war credits, which have been treated as a loan to the central government and therefore appear now in personal saving (item 28).
- 24. The corresponding item in Cmd. 6784 (item 34) included, in addition to death duties, stamp duties on the transfer of property, which have here been treated as an indirect tax and therefore appear, to the extent that they are paid out of personal income, in item 22 above.

- 25. The contributions of employees and voluntary contributors to the national insurance schemes (health, unemployment and pensions).
- 26. War damage contributions and premiums and other minor indirect taxes, less direct taxes estimated to be paid by foreigners.
- 27. This item shows the excess of the liability for direct taxes accruing on current income over current direct tax payments. It relates particularly to income tax on interest and profits and to surtax since in these cases liabilities in respect of current incomes (payable in the future) differ considerably from current payments at times when money incomes or rates of taxation are changing. Income tax accruals in respect of income assessed under Schedule E (wages and salaries) have been omitted throughout the period. This has been done to avoid the discontinuity which would otherwise have been introduced into the figures as a result of the introduction of the "pay as you earn" scheme in 1944.

Tax liabilities have been calculated at current rates of taxation, except in 1945 when account was taken of the reduction in tax-rates, to take effect in April, 1946, which was announced in the autumn Budget of 1945.

28. This item represents the excess of personal income over outgoings on consumers' goods and services and liability for taxes and compulsory contributions. It has been obtained throughout by subtracting the sum of items 21 to 27 from item 20 and therefore depends on the accuracy of those items.

This item differs from the corresponding item in Cmd. 6784 since income tax repayable as post-war credits has been treated here as saving and not as a tax payment.

- 29. This item is the sum of items 21 to 28, which show the various forms of personal outlay. Current income may be (a) spent on consumers' goods and services, (b) paid away in taxes and the like, (c) set temporarily aside against increase liabilities to tax or (d) added to past savings. Since this list is exhaustive the item is by definition equal to item 20.
- 30. This item is equal to that part of the national income (item 6 of table 15) which is neither paid out to persons nor accrues to public authorities as net income from property (items 42 and 43 of table 17).
- 32. The total payments of National Defence Contribution, Excess Profits Tax and Profits Tax, before deduction of post-war refunds of Excess Profits Tax.
- 33. This item is composed of other direct taxes such as income tax and war damage contributions and premiums met out of other private income. The 1946 figure excludes income tax on post-war refunds of Excess Profits Tax, which have been brought into the capital account (item 58 of table 18) after deduction of income tax. Together with items 23, 24, 25, 26 and 32 it is equal to item 39 of table 17.
- 34. This item shows the excess of the liability for direct taxes accruing on current undistributed income over the current payments of these taxes. Tax liabilities were calculated as explained in the note to item 27.
- 35. An estimate of the net undistributed profits of companies. Post-war refunds of Excess Profits Tax have been treated as a capital receipt (item 58 of table 18) and therefore do not enter into this item.
 - 36. The sum of items 32 to 35 and by definition equal to item 31,

- 37. The sum of items 20 and 31; equal to item 6 of table 15, plus items 47 and 48 of table 17, less items 42 and 43 of table 17.
 - 38. The sum of items 29 and 36.

Table 17

This table summarises the income and current expenditure of public authorities in the United Kingdom. Transfers between one public authority and another, such as Exchequer grants to local authorities and similar contributions to the national insurance funds are excluded from both sides of the account. In the separate accounts for the central government, the local authorities and the national insurance funds shown in Appendix III each transfer is shown as a payment by one authority and a receipt by another.

Expenditure on goods and services is here net in the sense that it is after deduction of goods and services sold by public authorities to the general public, which are included either in personal expenditure on consumption or in private net capital formation at home.

39. This item includes all taxes on income and capital (other than the small amount paid by foreigners) together with gifts, fines and other similar receipts. It is made up of items 1 to 7 and 42 of Appendix II; the notes on these items contain full definitions. It is equal to the sum of items 23, 24, 25, 26, 32 and 33 of table 16.

The corresponding item in Cmd. 6784 (item 49 of table 22) included certain taxes which have in this Paper been treated as indirect taxes and included in item 40. It included, moreover, income tax repayable as postwar credits, which has here been treated as a loan to the government and not as a tax.

40. This item includes all taxes on outlay (other than the amount estimated to enter into the value of British exports, which has been treated as government income from property). It thus differs from the corresponding item in Cmd. 6784 (item 52 of table 22), which omitted certain taxes here treated as indirect taxes: wireless licences, stamp duties on the transfer of property and motor vehicle duties paid out of personal income. This item, moreover, includes the Post Office trading profit, which was previously treated as government income from property. This last change in practice has been made on the ground that monopoly gain is more akin to an indirect tax than to the income of a factor of production.

The item is made up of items 8 to 17, 43 and 54 of Appendix II; more detailed definitions are given in the notes to those items. It is equal to item 13 of table 15.

- 41. The sum of items 39 and 40; equal to the sum of items 18, 42, 43 and 54 of Appendix II.
- 42. This item consists of the trading profits of government departments and local authorities which carry on business in competition with private enterprise. It differs from the corresponding item in Cmd. 6784 for three reasons: (i) it excludes the trading surplus of the Post Office for the reason given in the note to item 40; (ii) it includes the investment income of the national insurance funds which, in so far as it was derived from holdings of the National Debt, was previously treated as an inter-governmental transfer; (iii) it includes certain receipts (e.g. under the Bank of England Act, 1946), used to make payments of interest outside the permanent debt charge; (iv) in the years 1944 to 1946 it includes as a negative element the loss made by the Exchequer as a result of illicit trading by British troops and other Government employees abroad. The item is made up of items 19, 20, 44 and 55 of Appendix II.

- 43. Total interest on the national debt, whether part of the permanent debt charge or met out of specific receipts such as receipts under the Bank of England Act, 1946, together with the increase in interest accrued on National Savings Certificates. National debt interest was in Cmd. 6784 treated as a transfer payment. In this Paper it has been treated as negative government income. To the recipients of the income, whether they are private individuals and companies, or public authorities (e.g. national insurance funds), it is, of course positive income. The addition of private income from work and property (items 15, 16, 17 and 30 of table 16) to government income from property (items 42 and 43) thus gives the total national income (item 6 of table 15).
- 44. The sum of items 41 to 43; i.e. equal to tax revenue and miscellaneous trading profits, etc., of public authorities, less national debt interest.
 - 45. This item is made up of items 23, 24, 47, 48 and 58 of Appendix II.
- 46. This item is identical with item 12 of table 15; it is made up of items 25 and 59 of Appendix II.
- 47. This item is equal to item 18 of table 16; it is made up of items 26, 49, 50, 51 and 60 of Appendix II. The notes to these items give more detailed definitions.
- 48. This item is equal to item 19 of table 16; a breakdown of the figure is given in item 27 of Appendix II, the note to which gives a more detailed definition.
- 49. Payments in respect of claims under the commodities and marine war risks insurance schemes and the War Damage Act.
 - 50. These refunds are shown after deduction of income tax.
- 51. This item measures the difference between the revenue of public authorities and their expenditure other than on net capital formation; it is made up of items 32, 52 and 61 of Appendix II and is identical with item 53 of table 18.
- 52. The sum of items 45 to 51; equal to items 33, 53 and 62 of Appendix II, less items 30 and 31 of Appendix II.

Table 18

- 53. The sum of items 28 and 35 of table 16.
- 54. The sum of items 27 and 34 of table 16.
- 55. The same as item 51 of table 17.
- 56. These allowances are treated here in a narrow sense in that they exclude, except in the case of buildings, highways and bridges, the greater part of outlays for current repair work.

So far as the private sector is concerned, the estimates are based mainly on the allowances, as computed for income tax purposes, which were due each year, viz., allowances for repairs, etc. under Schedule A and wear and tear and obsolescence allowances under Schedule D. In fact, when firms are assessed under both Schedules A and D the Schedule A allowances are non-operative and the deduction allowed for repairs before tax is chargeable is the actual amount spent.

Because gross capital formation has, except in 1938, been estimated by adding the sums allowed for depreciation and maintenance to the figure of net capital formation obtained as a residual in table 15, the conventional treatment of depreciation allowances adopted in this Paper has affected gross capital formation (item 60) to exactly the same extent as this item; a change in practice would alter this item and item 60 but would leave item 9, net capital formation, unchanged.

An addition has been made to income tax allowances to cover the amount received by business insurers in respect of claims for damage (other than war damage) to fixed capital goods and the increase in assurance reserves to meet business claims of all kinds. Expenditure on making good such damage appears in gross capital formation; by the practice here adopted provision for insurable loss is treated identically with provision to meet normal wear and tear.

In the case of local authorities sums repaid to lenders and transferred to sinking funds are treated as the equivalent of depreciation allowances, as explained in the note to item 9. Expenditure by public authorities on maintaining highways and bridges is included, as is also Post Office capital expenditure charged to Vote.

Total depreciation allowances increased sharply in 1946. Firms which have recently replaced old plant with a low written-down value or even fully depreciated, by new plant bought at higher prices would in any case have been entitled to considerably increased tax-free wear and tear allowances, since these allowances are calculated on the original cost of assets. The introduction in 1946 of special initial allowances on all new plant installed contributed further to the increase.

For the same reason, of course, profits, which are calculated after deduction of allowable expenses, were lower in 1946 than they otherwise would have been.

- 57. The same as item 49 of table 17.
- 58. The same as item 50 of table 17.
- 60. Composed of total expenditure on fixed capital works, etc., together with the change in the value of stocks and work in progress implied in the calculation of profits. As explained in the note to item 56 this item is treated here in a narrow sense since, except in the case of buildings, highways and bridges, the greater part of outlays on repair work is excluded.
 - 61. The same as item 10 of table 15.
 - 62. The sum of items 60 and 61.

NOTES ON TABLES IN APPENDIX II

Table 19

The term central government has been used in a wider sense in this and the succeeding table than in the corresponding tables of Cmd. 6784. Central government revenue and expenditure now include the current receipts and payments of the various war damage and war risks insurance funds and of all extra-budgetary funds except the national insurance funds treated separately in table 21.

Direct taxes.—The figures given for items I to 5 represent net receipts by the Board of Inland Revenue.

- r. This item excludes (a) income tax due for repayment after the war, which has been treated as personal saving, and (b) income tax on post-war refunds of Excess Profits Tax, which appear on the other side of the account (item 28) after deduction of income tax.
- 4. This item represents gross receipts of Excess Profits Tax. Post-war refunds have been treated as an item of expenditure (item 28).
 - 6. Contributions and premiums under the War Damage Act, Parts I and II.
- 7. Inland Revenue duties other than stamp duties and those shown above, plus direct taxes levied by the Government of Northern Ireland, plus certain components of miscellaneous revenue and appropriations in aid of Votes (e.g. fines and gifts), less an estimate of direct taxes paid by foreigners (which have been treated as government income from property).

Indirect taxes.—Items 8 to 12 and item 14 represent net receipts by H.M. Customs and Excise and by the Board of Inland Revenue respectively.

- 15. The surplus shown in the Post Office commercial accounts. In Cmd. 6784 this surplus was treated as a trading profit and not as an indirect tax.
- 17. Excise licences not collected by H.M. Customs and Excise, *plus* wireless licences, *plus* indirect taxes levied by the Government of Northern Ireland, *plus* certain appropriations in aid of Votes, *less* an estimate of indirect taxes paid by foreigners (which have been treated as government income from property).
- 20. Receipts from Crown Lands, plus the interest component of receipts from Sundry Loans, plus certain items in miscellaneous revenue, such as contributions towards the cost of the war received from colonial governments and peoples, plus current receipts under the Bank of England Act, 1946, the Overseas Trade Guarantees Act, 1939, the Housing (Temporary Accommodation) Act, 1944, and the Building Materials and Housing Act, 1945, plus investment income received by the war risks insurance funds and other extra-budgetary accounts managed by the National Debt Commissioners, plus the excess of interest received by the Local Loans Fund over interest paid on Local Loans stock.
 - 21. See note to item 43 of table 17 (p. 29).
 - 23. Including all war expenditure, even though of a capital nature.
- 24. This item was not previously treated as a part of government expenditure, but was shown separately as a constituent of private net capital formation (item 10 of table 20 in Cmd. 6784).
- 25. Agricultural subsidies such as the beet sugar subsidy, milk subsidy, wheat deficiency payments and grants in respect of fertilizers, grassland ploughing and field drainage; acreage payments; losses incurred on the commercial accounts of the Ministry of Food and the Ministry of Transport; subsidies in respect of coal paid by the Ministry of Fuel and Power; subsidies in respect of utility clothes and certain raw materials met by the Board of Trade and the Ministry of Supply; subsidy to civil aviation.
 - 26a. Old age pensions and supplementary pensions.
 - 26b. These payments were made only from August 1946 onwards.
- 26c. The Ministry of Food's contributions to the cost of milk provided under the National Milk and milk-in-schools schemes and of orange-juice, cod-liver oil and vitamin tablets provided under the vitamin schemes.
 - 26d. Allowances paid by the Assistance Board.

- 27. Identical with item 19 of table 16.
- 27e. Fireguards' allowances and transfer payments made by the Government of Northern Ireland.
- 28. Payments in respect of claims under the commodities and marine war risks insurance schemes and the War Damage Act. The same as item 57 of table 18.
 - 29. These payments are shown after deduction of income tax.
 - 34. The same as item 32 of table 19.

Table 20

- 35. The amount provided for maintenance work on buildings and roads. This provision is also included in item 23 above. It is not a close estimate but is believed to be of the right order of magnitude.
- 36. Including capital receipts other than borrowed monies. The channels through which this borrowing was financed are detailed in table 24.
- 38. Post Office loan expenditure, Road Fund expenditure on improvements and new construction, expenditure on the manufacture of pre-fabricated houses, *plus* expenditure on maintenance of buildings and roads. All expenditure connected with the war has been excluded even though it was of a capital nature. Logically, changes in government-owned stores of food and raw materials should be included in this item rather than in item 23 of table 24. The figures shown refer to fixed capital only, however.
- 39 and 40. These two items are given separately since they represent mere transfers of existing assets from private to public ownership and vice versa. Item 39 includes only the State's expenditure on acquiring the assets of the Bank of England. Logically, this item should include also purchases of land and buildings, which have here been included in item 38. Item 40 shows the sales of surplus stores, whether or not the proceeds have been paid into the Exchequer. It excludes sales by one government department to another. The expenditure of the purchasing department is similarly excluded from items 23 and 24.

Table 21

This table sets out the revenue account of the Unemployment Fund, the various national health insurance funds and the contributory pensions scheme.

- 42. Contributions of employees and voluntary contributors.
- 43. Employers' contributions.
- 44. Investment income, mainly national debt interest.
- 45. Exchequer contributions to the Unemployment Fund, national health insurance funds and Treasury Pensions and Special Pensions Accounts.
 - 50. Cash benefits under the national health insurance scheme.

Table 22

- 54. Composed of local rates and central government contributions in lieu of rates, with the exception of water rates, which are treated as current receipts from a trading service.
- 55. An estimate of the profits from trading services and corporation estates treated in such a way that contributions to rate fund accounts are included, while transfers from rate fund accounts in aid of deficiencies are not.

- 58. This item consists of all local authorities' expenditure on revenue account other than that recouped from the private sector of the economy in the form of fees, rents, etc., plus capital expenditure on emergency services, less the housing subsidies shown separately in item 59.
- 59. The excess of local authorities' expenditure on housing service revenue account over their receipts from rents.
 - 60. Public assistance (out-relief) in cash and kind.

Table 23

- 63. The same as item 61 of table 22.
- 64. Sums repaid to lenders and transferred to sinking funds (which are treated as the equivalent of depreciation allowances), plus an estimate of sums provided for maintenance of highways and bridges and included in item 58.
- 67. Capital expenditure on works, less receipts from the sale of assets, plus maintenance of highways and bridges.

Table 24

- 69, 70 and 71. The net increase in these funds available for loan to the Exchequer, *less* the excess of interest received over interest paid by the Local Loans Fund, which has been included in central government revenue.
- 72. The net increase in government securities held by the Exchange Equalisation Account, plus the reduction in the Exchequer balance, plus repayments of principal included in receipts from Sundry Loans and Miscellaneous Receipts, less government lending included in Ordinary Expenditure, less net issues under certain Acts, e.g. North Atlantic Shipping Act, 1934, Tithe Act, 1936, Anglo-Turkish (Armaments Credit) Agreement Act, 1938, Overseas Trade Guarantees Act, 1939. The item also includes an allowance for the increase or decrease in government liabilities to industry (to balance item 24 of table 19) and, in 1946, the amount of 3 per cent. Treasury Stock issued (to balance item 39 of table 20).
- 75. The net sum due from the United Kingdom to the United States for the settlement of Lend-Lease and Reciprocal Aid, for the acquisition of surplus property and the United States interest in installations located in the United Kingdom and for the settlement of claims.
 - 78. This item is made up of two components;
 - (a) the amount of income tax paid in each year that is repayable subsequently as post-war tax credits; this amount has been excluded from tax revenue (item 18 of table 19);
 - (b) the amount of pay credits that accrued to members of the Armed Forces during their period of services; an equivalent amount has been included in central government expenditure on goods and services (item 23 of table 19).

When these tax and pay credits are cashed the figure becomes negative, since in effect the government is repaying its previous borrowing.

- 80. The sum of items 69 to 79, the total of sums used to finance the central government deficit which is received from government funds and similar sources as opposed to loans from the public.
- 81. The increase in investments from the net deposits in the Post Office and Trustee Savings Banks. These deposits include certain war gratuities not yet encashable; an equivalent amount has been included in miscellaneous transfer payments (item 27a of table 19).

82 and 83. Receipts less repayments.

- 84. Receipts from public issues, e.g. National War Bonds and Savings Bonds and Other Debt (net) less securities redeemed and excluding purchases of government securities (war or pre-war issues) by public departments and by the Land Fund.
- 86. The increase in bills held by the market or by Empire Funds and in Bank Ways and Means Advances, plus, in 1946, the short-term loan from the Argentine Government.
 - 87. Receipts less repayments.

TABLE 25

- 88. The increase in the amount of certificates outstanding.
- 89. The sum of items 81 to 88, showing the amount of public borrowing at home, whether from British citizens and/or from foreign lenders.
 - 90. The sum of items 80 and 89; the same as item 36 of table 20.

The figures relate as far as possible to expenditure met out of personal income including that of charities and other non-profit-making bodies as well as of individuals. The figures for individual categories relate to purchases in this country even when made by tourists or Dominion and Allied troops. On the other hand they do not include consumers' expenditure abroad out of British personal income. A rough adjustment for these factors is included in item 18.

Expenditure on consumers' goods and services by business and public authorities is, as far as possible, excluded except in certain cases where the object purchased is re-sold to persons as part of a composite product or service. Thus, personal expenditure on meals in restaurants and hotels is spread over several categories: the cost to the establishment of the food used appears in item 1, food; the rent of the building in item 4, rent, rates and water charges; the chinaware and cooking utensils purchased in item 6, hardware and an allowance for the purely service and managerial element of expense in item 14, other services.

The figures represent the expenditure of consumers in the above sense on goods and services of all kinds whether these are provided out of new production or from stock. Second-hand goods are not included, but an allowance is made in item 14, other services, for the costs, including profit, of handling and reconditioning them.

The items included in each group are set out below:

I. Food—comprises purchases of food, including non-alcoholic beverages, by households, together with the value at farm prices of farm produce consumed on farms and the cost to the establishment of food used in canteens, restaurants and hotels. The full value of the welfare foods provided under the National Milk, milk-in-schools and vitamin schemes is included in this item.

The composition of the sub-groups of household expenditure is shown in greater detail below:

Bread and cereals, etc.

Meat, bacon, etc. ...

Oils and fats ... Sugar, preserves and

confectionery
Dairy products ...

Beverages not included below
Other manufactured

Other manufactured food

Bread, flour, cakes and biscuits, oatmeal, rice and starch.

Meat, offal, canned meat, bacon and ham, meat products, rabbits, game and poultry.

Butter, margarine, lard and edible vegetable oils. Sugar, jam, marmalade, chocolate and sugar confectionery and glucose.

Fresh, canned and dried milk, cheese, eggs in shell, dried, liquid and frozen eggs.

Tea, coffee and cocoa.

Miscellaneous manufactured products of which the more important are cereal breakfast foods, custard and blancmange powders, macaroni, spaghetti, etc., canned soups, syrup and treacle, and soft drinks.

- 2. Alcoholic beverages
 - a. Beer, ale, stout and porter.
 - b. Imported wines, British wines, spirits, cider and perry.
- 3. Tobacco—comprises purchases in the United Kingdom, including gifts to troops overseas. An allowance has been made for the concession introduced in 1942, by which members of the Armed Forces were able to buy a limited quantity of tobacco at N.A.A.F.I. canteens at reduced prices.
 - a. Home-produced cigarettes.
 - b. Home-produced pipe tobacco, cigars, snuff and all imports of finished tobacco products.
- 4. Rent, rates and water charges—includes an allowance for buildings occupied by non-profit-making bodies and for hotels, boarding houses, etc.

in addition to private dwelling houses. There can be no doubt that the figures are too low since they take no account of any rents which are charged in excess of Schedule A income tax valuations.

- 5: Fuel and light—includes the value of the fuel and power only. The cost of the hire of equipment is included in item 14.
 - a. Coal—includes miners' coal valued at pithead prices.
 - b. Electricity.
 - c. Gas.
 - d. Coke. oil fuels and firewood.

6. Durable household goods-

- a. Furniture, furnishings, household textiles, floor coverings and musical instruments (including wireless sets, gramophones and accessories).
- b. Pottery and glassware, ironmongers' goods, electrical goods, heating and cooking appliances, sewing machines and refrigerators.
- 7. Other household goods
 - a. Matches.
 - b. Toilet, shaving and household soap, scourers, etc.
 - c. Polishes, candles and nightlights, miscellaneous cleaning materials, etc.

8. Clothing-

- a. Footwear covers all new boots, shoes, slippers, etc., but not socks and stockings, repairs or repair materials.
- b. Other clothing covers all kinds of garments, dress materials, millinery, haberdashery, etc. An allowance for the making-up of customers' materials is included but expenditure on alterations and repairs appears in item 14. All dress materials are allocated to b (ii), and so are such things as knitting wool and general haberdashery. Infants for this purpose are children under about four years of age.
- 9. Books, newspapers and magazines
 - a. Books.
 - b. Newspapers.
 - c. Magazines.
- ro. Private motoring—comprises an estimate of the purchases by persons of motor-cars, motor-cycles and motor accessories and the running expenses incidental to their use, together with an allowance for dealers' margins on second-hand vehicles. For the first time this item includes the cost of licensing the vehicles. Previously motor vehicle duties paid out of personal income were treated as direct taxes.
- II. Travel—includes all travel in public conveyances paid for out of personal income and therefore the travel of members of the Armed Forces when at their own expense.
 - a. Main line, joint line and London Passenger Transport Board railways.
 - b. Buses, coaches, trams, trolley-vehicles, taxis, etc.

12. Communication services—

- a. Postage on letters, parcels, etc., and the poundage on postal and money orders.
 - b. Telephone rentals, local and trunk calls and telegrams.

13. Entertainments-

- a. Admissions to cinemas.
- b. Admissions to theatres, concert-halls, music-halls, sporting events, dance-halls, skating rinks and all other places of public amusement and expenditure on wireless licences.
- 14. Other services—includes expenditure out of personal income on the factors of production taken up in providing all forms of assurance and in facilitating the acquisition and transfer of property (including stamp duties thereon), expenditure on medical services not provided under the national health insurance scheme, undertaking, hairdressing, hotel and restaurant services, domestic service, repairs to furniture, clothing, footwear, watches, etc., dealers' margins on second-hand goods (other than motor vehicles), the hire of domestic heating and cooking equipment and other miscellaneous services.
- 15. Other goods—includes stationery, fancy goods, jewellery, bicycles, travel goods, toys and sports goods, chemists' wares other than drugs and medicines provided under the national health insurance scheme, flowers, garden seeds, domestic pets, etc., and dog and gun licences.
- 16. Income in kind of the Armed Forces—cost of providing members of H.M. Forces and Auxiliary Services with food and clothing, including civilian clothing issued on release from the services.
- 17. Adjustment.—The figures in all the previous categories include expenditure in the United Kingdom by tourists from overseas and Allied troops temporarily resident in this country and exclude expenditure abroad by British tourists and members of the Armed Forces. An adjustment is needed to convert the total to a total of purchases out of British income. The adjustment given here also includes a rough allowance for the excess of personal remittances abroad from this country over remittances received in this country from overseas. This is because remittances sent abroad appear in British income but not in British expenditure whereas remittances received from overseas are not treated as income although they finance British expenditure.

⁽¹⁾ The bulk barrel has been taken as the unit of quantity in this table: if, instead, the standard barrel were taken the series would run: 195, 202, 194, 203, 196, 201, 210, 231, 199 (£ million at 1938 prices).

⁽²⁾ There is no proper basis for revaluing the adjustment given in the corresponding line of table 25. The figures given here are in the same ratio to the figures in table 25 as the total in line 17 is to the corresponding total in table 25.

The figures shown for consumers' expenditure at 1938 prices have all been estimated by the same method. The quantities of each item actually bought in any particular year have been revalued at their 1938 prices and the resulting products have been added in order to arrive at a total. Thus, the movement of the total in line 19 is of very limited significance. If consumers, unable to buy clothes and furniture, spend their money instead on semi-luxuries which are in good supply, the total is unaffected even though consumers' satisfactions are reduced.

Tables 25 and 26 have dealt with consumption of goods and services from the consumer's point of view. Table 27 shows, on the other hand, what the producers and sellers of these goods and services actually receive. This is made up of consumers' expenditure, less indirect taxes paid to public authorities, plus subsidies received from public authorities. The method of allocation of taxes and subsidies used is described in the notes to table I on p. 56.

APPENDIX IV

THE GOLD AND U.S. DOLLAR RESERVES AND EXTERNAL LIABILITIES OF THE UNITED KINGDOM

The following tables continue tables 6 to 9 of Cmd. 6707 but are compiled on a slightly different basis. The figures of gold and U.S. dollar reserves of the United Kingdom given in table 28 below, unlike those in table 8 of Cmd. 6707, are shown without deduction of outstanding liabilities to provide gold against sterling liabilities and of liabilities to convert U.S.A. holdings of sterling into dollars. Consequently, these liabilities are now included in the figures shown below of external liabilities of the United Kingdom. The receipt of revised or additional information has also caused further amendments in tables 29 and 30 below as compared with tables 6 and 7 of Cmd. 6707.

48. Total receipts	1,008	1,662	52. Total payments	1,008	1,662

The tables in this appendix summarise in accounting form the money flows of the British economy. It is, because of the lack of sufficiently detailed data, a highly simplified system of accounts, and even so it has been possible to set it out only for two years. It is published here, in spite of its bareness, because it is believed to be a clear way of setting out the relations between the different sectors of the economy.

The titles of the different accounts are in general self-explanatory so that it is unnecessary to add much by way of commentary.

The general principle is that of normal double-entry accounting: every receipt by an account appears also as a payment or a negative receipt by that account or some other. The numbers in brackets after each item refer to the *contra* item on the other side of the account.

Account A sets out the consolidated trading account of all business enterprises, both public and private. (1) On the receipts side appear the proceeds of sales to different classes of purchaser, together with subsidies received from the Government. On the payments side appear the outgoings of business enterprises on purchases of imported goods and services, provision for depreciation, indirect taxes and labour costs, together with the trading profit.

The trading profit is then carried down to what has here been called the property income appropriation account (B). To the trading profit is added other income from holdings of the national debt and other securities, domestic and foreign. The total of these receipts represents total property income. Part of it is distributed in the form of dividends, interest and rent; part is paid to the government in taxes on profits; the remainder is carried to capital account as additions to free reserves.

Account C shows on the receipts side the income of persons received, as dividends, etc., from account B, their wages and salaries paid out of account A and in addition their earnings from direct services to other persons and to the government and transfer incomes. These receipts are spent at home and abroad on consumers' goods and services, paid in taxes to the government or saved, i.e., put to capital account.

Account D shows the current non-trading receipts of government (local authorities, national insurance funds and central government) and their disposal. Any surplus, whether positive or negative, is carried down to the capital account.

⁽¹⁾ The concept of enterprise used here is wider than that adopted in table 7 in that the gross rents of dwelling houses are here treated as part of the receipts of business enterprises.

Account E consolidates the capital account of the whole economy. On the receipts side appear the various sums saved out of current receipts by persons, business enterprises and government, together with the sums set aside to provide for replacement of worn-out assets. All these sums are available to finance replacement of and additions to the national stock of assets at home and abroad.

Account F summarises the relations of other countries to this country. It is, in fact, this country's balance of payments on current account looked at from the point of view of the outside world. Hence, imports appear as a receipt of money (by the outside world), exports as a payment, and so on.

It is possible to derive from these accounts all the significant totals of income and expenditure set out in the earlier tables of this Paper. A few examples only will be given. The net national product may be thought of as made up of the value of the net output produced in this country and of net income from overseas:

·							1938	1946
							£ mi	llion
Net output produced in	the Un	ited K	ingdom	(7+2	(0a + 32)	•••	4,496	7,894
Net income from overse	as (50 -	-47)	•••	•••	•••	•••	175	80
								-
Net national product	• • •	•••	•••	•••	•••	•••	4,671	7,974

A different grouping of items gives a distribution of income between factors of production:

					•	1938	1946
						£m	illion
			• • • •	•••	•••	2,923	5,218
fit (12+2	8b — 1	3a)	•••	•••	•••	1,748	2,756
						4 671	7.974
	•••	•••	•••	•••	•••	4,071	7,774
		fit (12+28b-1	fit (12+28b-13a) (, ,	fit (12+28b-13a)	fit (12+28b-13a)	y of Armed Forces (16) 2,923 fit (12+28b-13a) 1,748

The net national expenditure in the form given in table 15 can also be obtained from these accounts:

-							1938	1946
							£m	illion
Personal expenditure on o	onsu	mption	(20 + 2)	21)	•••	• • •	4,252	6,584

APPENDIX VI

A COMPARISON WITH Cmd. 6784

The figures given in this Paper in some cases differ substantially from the estimates published in Cmd. 6784. There is no single reason for this which can be briefly set out. In part the revisions are due to differences of definition; when this is so the change is explained in the notes to the tables. In part it is due to the fact that estimates based on tax statistics must necessarily be provisional until assessments have been finally agreed, which is in some cases several years after the income has been earned and spent.

This last factor is responsible for the overestimation in Cmd. 6784 of the rise in profits and interest during the later war years. It is not to be expected that the present estimates will be any less immune from later amendment. The direct influence of such errors on the total national income or expenditure is, of course, small; the indirect effect on the residual items which still cannot be separately estimated is proportionately much greater. These items, private saving and private net capital formation, in fact, absorb the whole effect of errors of estimation. This can be clearly seen in the case of private saving in table 33 below (though it should also be stressed that the size of the variations in the successive estimates of saving is in part due to the fact that the year 1938, when saving was small, has been taken as base).

,, ,, 6623	100	151	315	408	444	484	465		_

This table illustrates only changes in successive estimates of the movement of the various magnitudes over time. There have also been appreciable revisions of the absolute level of some of the estimates. Expenditure on food and services is now believed to have been underestimated not only during the war years but also in 1938, a year for which it has been possible to estimate separately each component of the national expenditure. These revisions made the estimates of expenditure inconsistent with the old estimates of income.

In order to reconcile the figures for 1938 an addition has therefore been made to income in that year to cover unassessed income and expense allowances. This addition has been increased somewhat in the later years, but is thought still to err on the conservative side. Until it is possible to get a direct measure of capital formation, however, the true figure of income is bound to remain uncertain.

One other major revision has been made. The wage bill of each industry has been separately calculated for the later years of the period. The resulting total proved to be lower than the global estimates previously made and revealed that the method used to arrive at the figures published in Cmd. 6784 and earlier papers had, during the war years, a definite upward bias.

APPENDIX VII

NOTES ON CERTAIN TABLES

Table 1. National Resources and their Disposal.

The estimates of the national cost of particular kinds of expenditure given explicitly in table 1 and as percentages of the national income in table 2 are in each case derived from the estimates of expenditure at market value given in table 15, by deducting indirect taxes estimated to be contained therein and adding subsidies.

The allocation of indirect taxes and subsidies over the four categories of expenditure (personal consumption, government current expenditure, exports and net capital formation) is inevitably to some extent arbitrary. The method followed has been to adjust each of the four categories of expenditure for taxes and subsidies known to be specific to them; components of expenditure known to contain no general indirect taxes (e.g. expenditure on domestic service, government expenditure on the wages and salaries of civil servants and the Armed Forces) were then deducted and the general taxes and subsidies spread pro rata over the remaining parts of gross national expenditure. Net taxes included in the value of exports were added to the national income as part of government income from property; the others were deducted in order to arrive at the estimates of the national cost of particular items shown in table 1.

The allocation of the indirect taxes less subsidies included in items 7 to 9 of table 15 is given below.

ALLOCATION OF INDIRECT TAXES AND SUBSIDIES

Table 3. Balance of Payments: Current Account.

The figures given for 1938 are based on the Board of Trade's published estimates of the 1938 balance of payments which have been adapted so as to bring them into line with the classification used for 1946. But the original data differ considerably between the two years. The 1946 figures are to a large extent records of actual payments and receipts derived from exchange control and other sources; the 1938 figures are based on records in the Trade and Navigation Accounts of movements of imports and exports and on other data which did not in general measure actual receipts and payments. The two sets of figures are, therefore, not strictly comparable.

Notes on particular items in table 3 follow.

I. Includes imports from United Kingdom stocks overseas and from the United States "pipeline" as arranged in the Lend-Lease settlement of December 1945, as well as imports for re-export. Imports recorded in the

Trade Accounts c.i.f. were £921 million in 1938 and £1,298 million in 1946. These include shipping and insurance expenses and measure imports as they pass through the Customs. The f.o.b. figures in the table exclude shipping and insurance and measure imports as payment is made for them.

- I(e). Includes ships (£5 million in 1946).
- 2(a). Expenditure on forces overseas less receipts from overseas governments on war account, including arrears and sales of surplus stores.
- (b). U.N.R.R.A. and rehabilitation in Eastern Europe and the Far East, including advances to devastated countries.
- (c). Cost of supplies for the British zone of Germany including exports from the United Kingdom (£20 million), less proceeds of German exports.
- 3. Partly estimated: comprises disbursements of United Kingdom ships abroad, freight and charter of foreign vessels and payments for British passengers in foreign ships. Excludes tankers:
- 10. Exports and re-exports as recorded in the Trade Accounts f.o.b. were £962 million in 1946. The figure in the table is an estimate of actual receipts from exports, which fall behind recorded shipments when these are increasing.
- II. Partly estimated: comprises income from the carriage of United Kingdom exports and from cross-trades, expenditure of foreign vessels in the United Kingdom and receipts from foreign passengers in British ships.
 - 12. Excludes insurance, shipping, and oil.
- 13. Includes, *inter alia*, net overseas earnings on oil and tankers, and an allowance for errors and omissions on current account. Items not specifically entered among payments are offset against various miscellaneous receipts in this item. Comparison between 1938 and 1946 is therefore precarious.

Table 4. Balance of Payments: Capital Account.

- 19. So far as ascertained,
- 20. Includes an allowance for errors and omissions on capital account.

Table 6. Composition of the National Wage Bill.

Wage-earners include all employees other than administrative, technical and clerical staff (i.e. managers, superintendents and works foremen; research, experimental, development, technical and design staff; draughtsmen and tracers; and office, including works' office, staff). Operatives employed in stores and warehouses, and canteen staffs directly employed by the firm, are included as wage-earners. Prisoners of war employed in this country are excluded, as are shop assistants and members of police forces and the National Fire Service (and the Civil Defence Services in 1945). The industrial groups are based on the Ministry of Labour's industrial classification; the grouping of industries, where it is not self-evident, is as follows:—

Metal manufacture: iron ore mining; pig iron manufacture; steel melting and rolling, etc., tinplates; and manufacture of non-ferrous metals.

Engineering and shipbuilding: General engineering; electrical engineering; marine engineering; railway carriages and wagons, etc.; shipbuilding and ship repairing.

Metal goods: hand tools and cutlery; iron and steel tubes; wire and wire netting; bolts, nuts and screws, etc.; and metal industries not separately specified.

Building materials and equipment: bricks, pipes, tiles, etc.; cement; cast stone; constructional engineering; electrical wiring and contracting; paints and varnish; glass manufacture (excluding bottles); wallpaper manufacture; brass and allied metal wares; stoves, grates and general ironfounding; heating and ventilating apparatus; sawmilling; woodworking not separately specified; lead, tin and copper mining; stone and slate quarrying and mining; clay, sand, gravel and chalk pits.

Textiles: excludes hosiery, lace and textiles not separately specified (e.g. smallwares).

Clothing and footwear: Includes leather tanning and fur dressing, hosiery and lace and textiles not separately specified.

Chemicals: chemicals; explosives; oils; greases, etc.; coke ovens.

Other manufactures: all other manufacturing industries; mining and quarrying not separately specified.

Farming: excludes the earnings of labour employed with hired machinery.

Transport, communications and public utilities: includes fishing.

Table 9. Private Income from Work and Property Before and After Tax.

It will be understood that in the case of mixed incomes the allocation of tax can only be arbitrary. Thus, if, for example, an individual's income is derived partly from wages and partly from interest-bearing securities, the tax payable depends partly on the size of his tax-free allowances and these are calculated with reference to his total income and not with reference to its separate component parts.

The allocation of tax used in compiling table 9 is given in more detail and for all the years since 1938 in the table that follows.

DIRECT TAXATION PAID IN RESPECT OF DIFFERENT TYPES OF INCOME AND PROPERTY
